"TrackMe"

THURAYA HANDSET AS A GPS TRACKING UNIT

www.selsat.ae

"TrackMe"

" TrackMe " is a small add-on device that can easily be attached to the standard Thuraya SO-2510 handsets for GPS tracking.

It has been developed as a "personal positioning" and "emergency reporting" device. It makes the Thuraya handset report its position to a remote device.

The mapping software can be on a PDA, or a windows based software or a web-application to be viewed by an individual, a control centre or over the internet on Google earth.

The key features that the unit can deliver are:

- Polling: Locating the person at any time.
- Tracking: Sending out GPS position at fixed intervals of time as specified by the user.
- Emergency positioning alarm: On pressing the PANIC button for 5 seconds, TrackMe sends out messages to 3 different control centres simultaneously requesting assistance.
- Information security: Tracking information is accessible only to certain Master/ Sub-master numbers based on "Call line Identification" system.
- Power on: Sends a message to the master number whenever "TrackMe" is plugged-in, to indicate readiness.
